Iteration 3

Carson Batt, Kevin Yu, Jose Rodriguez, Logan Greer
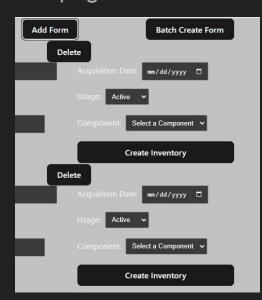

Software

Batch Upload feature:

- A newly added feature to speed up inputting new values within vote vault.
- Allows for mass creation of forms on the same page rather than repeatedly opening the new form tab.

Software

Login system

- Authenticate user and recognize them either as Admin or User
- Allow user to sign in with a magic link as well

Documentation

https://github.com/KyuXCode/VoteVault/blob/master/Documentation/User.md

https://github.com/KyuXCode/VoteVault/blob/master/Documentation/Development.md

Feedback

Mentor Feedback:

Need to add some integration testing, also need to work on the UI a little more

Client Feedback: Client said only positive feedback, has suggestions If we need them but would prefer to see our plans

Client Use Result: Client accessed meeting on phone and did have access to our software at the time. But he did ask us to put in certain values in the forms and asked us to demonstrate so edge cases handling

Future

4th iteration features:

- Updated UI
- Admin approval to accounts
- Batch upload for more entity

Teamwork

Carson: assigned to fix seednumber bug in audit sql script.

Kevin: Assigned & worked on user authentication, magic link, refactor, and backend testing

Julian: Assigned & worked on batch upload for Inventory units

Logan: Assigned to frontend & frontend testing
